Manual de Laboratorio de geología Victor Caballero, Luis Cruz, Eduardo Castro, 2012-05-16 Aquí se pretende ilustrar de manera básica y resumida los procesos que han transformado la Tierra y que se dan tanto en el interior como en el exterior de ella, cuyos resultados se ven reflejados en la formación de minerales y rocas y el paisaje que nos rodea. Se presentan siete laboratorios que van desde como identificar los principales minerales formadores de roca, identificar los tres tipos de rocas ígneas, sedimentarias y metamórficas, hasta como interpretar mapas topográficos y geológicos. Cada laboratorio introduce los conceptos básicos, los procesos geológicos y las propiedades de las rocas y minerales, al final de cada uno se da una guía para la identificación e identificación de las muestras de mano que el profesor asigne y que el estudiante debe analizar y describir como práctica introductoria en las asignaturas de geología, ingeniería geológica, ciencias de la tierra, geología para biología y otras.
